

**MANZOD46**

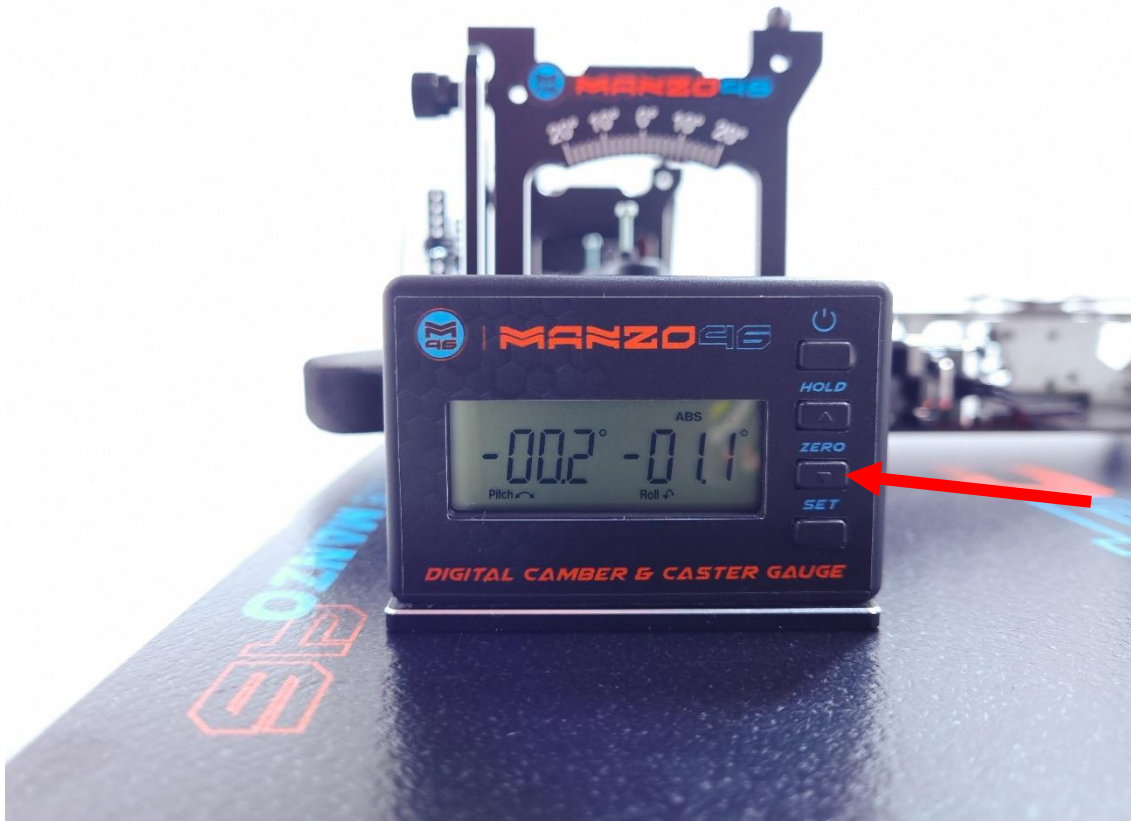

***DIGITAL CAMBER &  
CASTER GAUGE***

***MANUAL***

Use a thin double-sided tape (not included) to assemble them with the aluminum parts. Make sure there are no air bubbles under the tape to avoid wrong measurements.

First of all, you have to set them on your setup board, on the same way like you will measure on the car. Then you have to zero them with the “zero” button on the gauge.

Once the gauges are set on zero you can mount them on your car. The gauge will show you two measurements one is **pitch** (**caster**) and the other is **roll** (**camber**).

Important to know is when you measure simultaneously on both sides, you have one side of the pitch (caster) in **positive** values and the opposite side on **negative** values. (see in the pictures)
